

PGY1/2 Pharmacy Informatics Residency

Clare Chen

Previous Education: PharmD from the University of Texas at Austin

Short Bio: I grew up in Houston, TX. I moved to Austin for my Bachelor of Business Administration in Management Information Systems, and I stayed at the university for my PharmD. In my free time, I enjoy reading, hiking, and nature/landscape photography.

Factors Considered Most Important When Choosing Residency: The important factors I focused were opportunities for growth, size of the residency class, and diversity of the organization.

Why Aurora? From discussing the program with previous residents and connecting with the informatics team, I felt that this program has a very robust and efficient informatics department and a unique pharmacy structure. I also appreciate the supportive environment created by everyone to ensure residents' success.

Current rotations: Informatics Integration, Med Safety, EHR I, Business Intelligence, Informatics Administration, Pharmacy Automation, Data Management, EHR II, Outpatient Pharmacy, Pharmacy Operations

Year-long project: Sterile Compounding Optimization Within the Electronic Health Record

Future: I will be pursuing a full-time position in pharmacy informatics.
